

WHAT IS CLAIMED IS:

1. A method for remote energy consumption system identification of a facility, comprising:

receiving aggregated energy consumption data
5 associated with the facility;

receiving external variable data for the facility corresponding to the aggregated energy consumption data;

generating facility data associated with the facility;

10 generating disaggregated energy consumption data for the facility from the aggregated energy consumption data using the facility data and the external variable data; and

15 identifying an energy consumption system of the facility using the disaggregated energy consumption data.

2. The method of Claim 1, further comprising validating the aggregated energy consumption data.

20 3. The method of Claim 2, wherein validating the aggregated energy consumption data comprises:

analyzing the aggregated energy consumption data for missing data; and

25 reconstructing the missing data.

4 The method of Claim 3, wherein reconstructing the missing data comprises:

identifying a comparable facility;

30 retrieving energy consumption data associated with the comparable facility; and

reconstructing the missing data using the comparable facility energy consumption data.

5. The method of Claim 1, wherein receiving the aggregated energy consumption data comprises receiving the aggregated energy consumption data from an energy consumption database of an energy supplier.

6. The method of Claim 1, wherein receiving the aggregated energy consumption data comprises receiving the aggregated energy consumption data from a data collector disposed at the facility.

7. The method of Claim 1, wherein identifying an energy consumption system comprises identifying an energy consumption system for controlling an internal environment of the facility.

8. The method of Claim 1, wherein generating the facility data comprises generating the facility data based on the aggregated energy consumption data.

9. The method of Claim 1, wherein generating the facility data comprises generating the facility data based on physical characteristics of the facility.

10. The method of Claim 1, wherein receiving the external variable data comprises receiving environmental data corresponding to the aggregated energy consumption data.

11. The method of Claim 10, wherein receiving the environmental data comprises receiving the environmental data from an environmental service.

12. The method of Claim 1, further comprising
determining a modification of operating parameters of the
energy consumption system using the disaggregated energy
5 consumption data.

13. The method of Claim 1, wherein generating
disaggregated energy consumption data comprises
determining energy consumption for a particular time
10 interval from the aggregated energy consumption data, and
wherein identifying an energy consumption system
comprises identifying the energy consumption system from
the energy consumption for the particular time interval.

14. The method of Claim 1, wherein generating
disaggregated energy consumption data comprises:

accessing an energy consumption database of an
energy supplier, the energy consumption database having
energy consumption data associated with facility; and
20 evaluating the energy consumption data of the energy
supplier energy consumption database and the facility
data to generate the disaggregated energy consumption
data corresponding to the facility.

15. A system for remote energy consumption system identification of a facility, comprising:

a processor;

a memory coupled to the processor;

5 an energy consumption database accessible by the processor, the energy consumption database having aggregated energy consumption data associated with the facility;

10 a facility database accessible by the processor, the facility database having facility data associated with the facility;

15 an external variable database accessible by the processor, the external variable database having external variable data corresponding to the energy consumption data; and

20 an analysis engine residing in the memory and executable by the processor, the analysis engine operable to generate disaggregated energy consumption data using the aggregated energy consumption data, the facility data, and the external variable data, the analysis engine further operable to identify an energy consumption system of the facility using the disaggregated energy consumption data.

25 16. The system of Claim 15, further comprising a validation engine residing in the memory and executable by the processor, the validation engine operable to validate the aggregated energy consumption data.

"0402" 645001

17. The system of Claim 16, wherein the validation engine is operable to analyze the aggregated energy consumption data for missing data and, in response to determining that missing data exists, reconstruct the
5 missing data.

18. The system of Claim 17, wherein the processor is further operable to access energy consumption data associated with a comparable facility, and wherein the
10 validation engine is operable to reconstruct the missing data using the comparable facility energy consumption data.

19. The system of Claim 15, wherein the aggregated
15 energy consumption data comprises aggregated energy consumption data residing in an energy consumption database of an energy supplier.

20 21. The system of Claim 15, further comprising a data collector disposed at the facility, the data collector operable to transmit the aggregated energy consumption data to the processor.

22. The system of Claim 15, wherein the facility
25 data is generated based on the aggregated energy consumption data.

23. The system of Claim 15, wherein the facility data comprises facility data based on physical
30 characteristics of the facility.

24. The system of Claim 15, wherein the external

variable data comprises environmental data corresponding to the aggregated energy consumption data.

25. The system of Claim 15, wherein the analysis
5 engine is further operable to determine operating parameters of the energy consumption system using the disaggregated energy consumption data.

26. The system of Claim 25, wherein the analysis
10 engine is further operable to determine a modification to the operating parameters of the energy consumption system from the disaggregated energy consumption data.
